saying about

"Lumenis One is a culmination of IPL technology. Lumenis One combines technology features such as OPT, controllable, high-power, multisequential pulsing and ease-of-use features such as a Universal IPL treatment head with filters recognized by the system software. The system is very fast and gentle for the patient, and the presets and database make it easy for me and my practice to always provide the best possible treatments. After 13 years of development, the ideal IPL device that we originally conceived has come to fruition."

Mitchel Goldman, M.D.
Dermatologist / Cosmetic Surgeon
La Jolla, CA

"For skin treatments using photorejuvenation, the Lumenis One gives better results than other systems. Patients prefer this system because it's fast and hurts less. In fact, Lumenis One's biggest advantage is speed. Doing hair removal, we used to shy away from large areas, like backs, but now it's no problem. Lumenis One is great for our applications, and is better than any other IPL or laser equipment I have evaluated or seen."

Jeffrey Hunt, M.D.
Dermatologist
Tampa, FL

"I most commonly use Lumenis One for performing IPL skin treatments using photorejuvenation. With this system, treatments are faster and less painful for patients than with other systems. I especially appreciate the easy-to-switch filters and crystal size, and cooling is much improved over previous models."

Robert A. Weiss, M.D.
Dermatologist
Baltimore, MD

"I mostly use my Lumenis One to treat vascular lesions, pigmented lesions and hemangiomas, and for doing IPL skin treatments using photorejuvenation. I've also used it for rosacea and acne treatments. Lumenis One is better than other systems I've used—it's very fast and you can do treatments with a low energy level. It's also comfortable to work with, and I've found it helpful to have the parameters inside the machine. This is a great system and I'm very satisfied with it. Not only that—it looks good too!"

Gerd Kautz, M.D.
Dermatologist
Trier, Germany

"In the six months I've owned a Lumenis One, I have treated between 800 to 1,200 patients for hair removal, and brown spots, spider veins and matted superficial veins on the face, body and hands, as well as large leg veins—it's a great machine. The Patient Database has saved me significant time and money. It's phenomenal to be able to get all treatment parameters, as well as medical records that help the operator go to advanced settings quickly and are very professional looking when you print them out. This feature should be on every system. The system's large spot size, speed and ability to re-power itself have allowed me to see better results, less pain in patients and faster treatment times. The Lumenis One is truly a refinement of technology."

Corey Maas, M.D.
ENT Facial Plastic Surgeon
San Francisco, CA

"Lumenis One gives reliable and reproducible results, which are key to a successful IPL practice. With the multitude of presets, we can be very confident that we are providing the right parameters for whatever we are treating and on whichever skin type. In my experience, the treatments successfully take off the red and brown spots that come from a lifetime of photodamage. When my patients look in the mirror they are so happy—they see that the treatments have removed years from their appearance."

My nurses absolutely love the Lumenis One. They fought over it and didn't want to use any of the other systems in our office. We're now looking at purchasing our third Lumenis One."
