

## **New Fluke Connect™ system transfers measurement data from test tools to smart phones and the cloud, improving maintenance team communication, safety and productivity**

*The largest system of connected test tools in the world*

EVERETT, Wash., May 12, 2014 – Maintenance technicians make better, faster decisions when they have field access to maintenance records and when they can review measurements in real time with team members and supervisors. Yet records are usually kept back in the office and team members are rarely in the same place at the same time. The [Fluke Connect™](#) system solves these problems while increasing the safety of technicians working with energized equipment.

The Fluke Connect system allows maintenance technicians to wirelessly transmit measurement data from their test tools to their smart phones for secure storage on the cloud and universal team access from the field. More than 20 Fluke tools connect wirelessly with the app, including digital multimeters, infrared cameras, insulation testers, process meters, and specific voltage, current and temperature models.

Technicians can AutoRecord™ measurements and infrared images to Fluke Cloud™ storage from wherever they're working, without writing anything down. Everyone on the team with a smart phone and the app can see the data.

Team collaboration is made easy with ShareLive™ video calls, where technicians can share measurements with other team members in real time, get approvals for repairs or get questions answered without leaving the field.

The Fluke Connect app features EquipmentLog™ history, which allows technicians to assign measurements to specific equipment, creating a cloud-based

history of test measurement data for easy access during both troubleshooting and reliability maintenance. And TrendIt™ enables technicians to instantly graph data, helping to identify trends and quickly make informed decisions.

Fluke Cloud storage is built upon state-of-the-art security, including secure access, electronic surveillance, multi-factor access control systems, built-in firewalls, and encrypted data storage.

The Fluke Connect app can be downloaded for free from the Apple App Store and the Google Play Store.
